

Gururas K Khalsa, Virtual Design + Construction Manager

From an early age, Gururas was interested in building and design, and showed an affinity for architecture and the built environment. Her attention to detail and organization skills have helped her to excel both academically and professionally. Although a strong presence in the technical and managerial side of the industry, her passion continues to be design driven. This has led to a holistic approach taken to every endeavor.

With over eight years of experience in the field ranging across all aspects of project development, she brings to S2A a knowledge base that allows for coordination and integration between trades, phases, and the creative process. With her keen eye for design, projects can be explored thoroughly with a critical understanding of design intent.
