

Shelly L Weed, Reality Capture Manager

After 10 years of experience in crash investigation as a member of the Traffic Unit with the Police Force, Shelly Weed founded Weed Reconstruction & Expert Consulting in 2012. As an accredited Collision Reconstructionist, she has investigated over 2,500 collisions and completed more than 1,000 hours of advanced crash reconstruction training.

To aid in the reconstruction process, Shelly began utilizing the latest technology and equipment in laser scanning. She later discovered a significant niche in the design and construction industry. Over the course of two years, she scanned and created nearly a hundred point cloud projects, including roadways, apartment complexes, hospitals, water slides, restaurants, office spaces, and historical exhibits. Shelly's vast experience with collision reconstruction has given her a keen attention to detail which has provided her with a solid foundation for scanning the built environment, creating point clouds, and offering a smooth transition from as-built conditions to 3D modeling.
