

INTEGRATION

TTU Recreation Center

Cookeville, TN

With the largest construction scope across campus that TTU has seen since the 1960s, the new Recreation and Fitness Center is designed to be the campus “front door” and face of the university. This 165,000 SF facility features an array of gyms, indoor pools, tracks, climbing wall, studios, classrooms, and courts structured around an inviting atmosphere. To match the Georgian style architecture, the building has been allotted a budget of \$45M to convey the campus’ design and outfit the project.

The new recreation center will be purposed for the student and faculties on campus; providing structured classroom settings as well as areas for non-structured socialization. Workout and gym facilities will feature state of the art equipment, while the pool will feature segments for leisure as well as lap and watersport areas. Courts will present a spectator viewing space.
